

B.SC(IT)5TH SEMESTER

Date – 12/07/2025

Assignment 1

Subject - PHP

Submission Date - 24/07/2025

1. Create a PHP program using a global associative array to store employee salary details like *base_salary* and *bonus*. Write a function to calculate the total salary and store it in another global variable. Print the total salary outside the function.
- 2 . Design a multi-page PHP application to collect comprehensive student profile information through three sequential forms:
 - **Page 1:**Collect basic student details, including Roll Number, Student Name, and Date of Birth.
 - **Page 2:** Collect academic information including Course, Semester, and Percentage.
 - **Page 3:** Collect contact details, which should include Email, Phone Number, and Address.

Note: Create links for navigating between pages, such as "Previous" and "Next" buttons. Utilize PHP sessions to maintain data across multiple pages. After the final submission, display the complete student profile in a tabular format. Ensure that navigation between steps is user-friendly.

After the registration , Design a simple PHP-based login system with a personalized dashboard after successful login. The application should include the following features:

1. **Login Page** (Login.php):
 - Accepts Student id (Roll no) and Student name.
 - Includes a "Remember Me" checkbox.
 - If "Remember Me" is selected, store the Student id (Roll no) and Student name in a cookie.
2. **Dashboard Page** (dashboard.php):
 - Display a personalized welcome message (e.g., "Welcome, [Student Name]").
- 3 . Create a PHP application to allow users to upload their profile picture as part of a registration process:
 - Maximum allowed file size (e.g., 2MB)
 - Allowed file types (e.g., jpg, png, jpeg)
 - Define Target directory for File uploading (e.g., uploads/)

Note - Define constants that specify the maximum size allowed for file uploads.

If the file passes validation, file to the designated directory and display a confirmation message with a preview of the uploaded image. If validation fails, show appropriate error messages.
